

TVS PREFILTER WRAPS FOR GAS TURBINE CARTRIDGE FILTERS

TVS filter wraps are your first line of protection on gas turbine filter cartridges. They are especially effective on non-pulse cleaning systems. In some instances, they can be effective in some pulse-jet cleaning systems.

These medium efficiency prefilters are designed to capture large particles, airborne fibers and seeds, and unburned hydrocarbons before they get to the cartridge filters. This results in longer filter service life.

The media is a traditional high-loft, multi-denier media with a non-migrating, light dry tackifier on the blue downstream side to enhance particle retention. It is manufactured to UL900 Class 2 standards. The prefilters have a minimal effect on pressure drop. The pre-filters are manufactured with a Velcro closure for easy installation around cylindrical and conical filters.

PERFORMANCE DATA

LOFT	AIR FLOW	INITIAL RESISTANCE	FINAL RESISTANCE	DUST HOLDING	ARRESTANCE	MERV
½"	300FPM	0.09"	1.00"	181 G	84%	7
1"	300FPM	0.14"	1.00"	195 G	85%	7
2"	300FPM	0.15"	1.00"	236 G	93%	7

We have the pulse of the Industry so the choice is yours!
